

# BUNKATANK - THE UNDERGROUND WATER TANK - BT SERIES

## INSTALLATION

### Key

1. Inlet
2. Outlet
3. Dug out pit backfilled with sand or sand-crete (10% cement 90% sand)
4. Manhole lid
5. Compacted sand base without any stones or sharp objects
6. Breather vent
7. Lid cavity to be filled with concrete
8. No concrete or soilcrete should be placed above manhole use normal soil

### Note

1. Keep adequate distance between the tank and the foundation of the house
2. Locate tank away from driveway to prevent collapse of tank through pressure from vehicle
3. No water should seep back into dug out pit and before backfilling
4. Always fill tank with water before backfilling dugout pit
5. Manhole should be accessible for maintenance and pumping

# BUNKATANK

securing water • for healthy living

- Successful and extensively used South African design
- Dome shaped for extra strength
- Ideal where water supply pressure is low
- Easy to transport and install
- No change in water taste
- Flat bottomed
- Standard product
- Affordable & readily available

KENTAINERS, the manufacturers of KENTANK the No. 1 water tank, now bring you BUNKATANK - the State of the Art Underground Water Tank - made with food grade polyethylene and based on a very successful South African design in use for more than 15 years.

The product is moulded in one piece. Its unique dome shaped design provides excellent strength. Its flat base makes installation quick and simple. Compared to the more common masonry/concrete underground tanks, BUNKATANK has several major outstanding advantages shown above.

Start using BUNKATANK today and enjoy its benefits.
